Weekly MORBIDITY REPORT

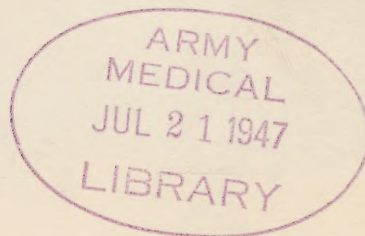

SHORE STATIONS IN CONTINENTAL UNITED STATES

NAVMED 104

WEEK ENDING 20 April 1946

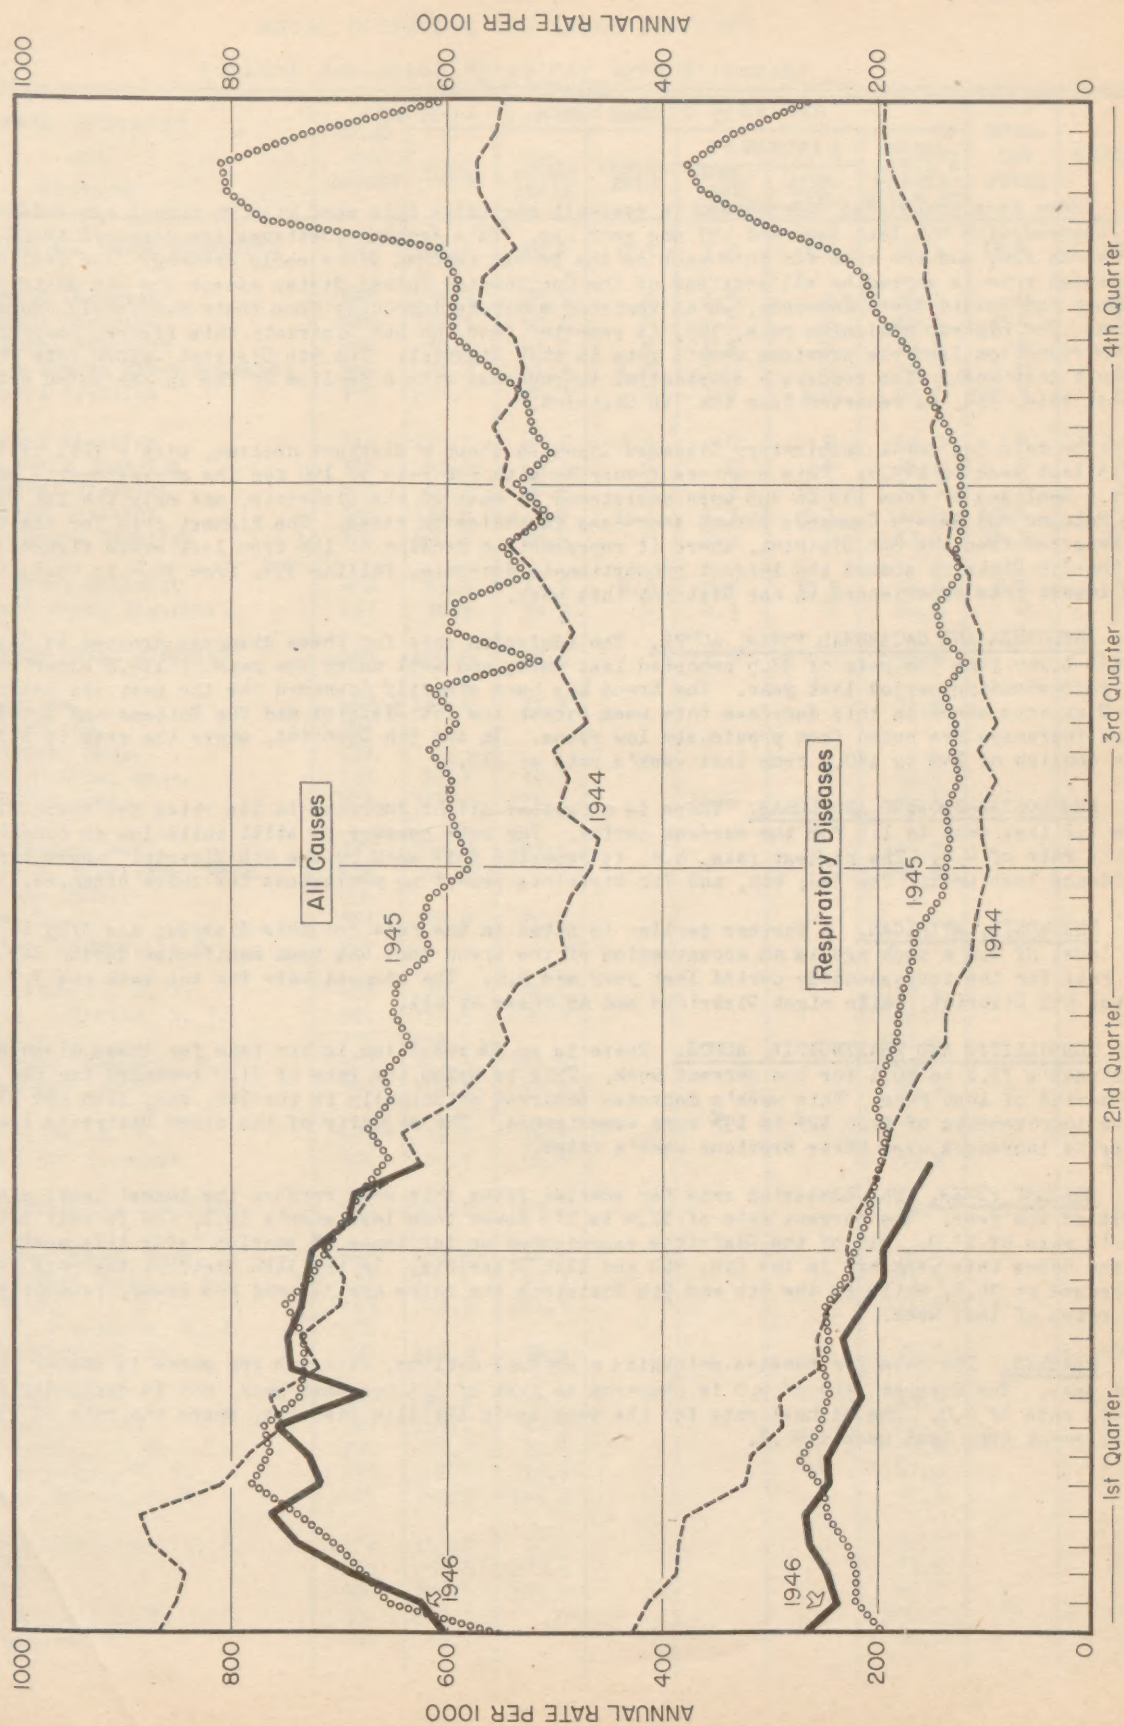

REPORT NO. 225

RESTRICTED—THE INFORMATION IN THIS REPORT IS NOT TO BE COMMUNICATED
DIRECTLY OR INDIRECTLY TO THE PRESS OR TO ANYONE NOT IN THE ARMED FORCES

ADMISSION RATES—ALL CAUSES AND RESPIRATORY DISEASES

CONTINENTAL LIMITS OF THE UNITED STATES—1944, 1945, 1946

WEEKLY MORBIDITY REPORT

RESTRICTED

CURRENT TRENDS
Week Ending 20 April 1946

There is a pronounced improvement in over-all morbidity this week with an annual admission rate of 629 as compared with 686 last week and 657 one year ago. This decline continues the downward trend that began six weeks ago, and the rate for this week is the lowest reached since early January. The decline in admission rate is shared by all sections of the Continental United States except the 4th District and the Potomac and Severn River Commands, which register moderate increases from their previously unusually low rates. The highest admission rate, 765, is reported from the 5th District; this figure, however, represents a 20% reduction from the previous week's rate in that District. The 9th District, whose rate was second highest last week, also reports a substantial improvement with a decline of 16% in admission rate. The lowest rate, 384, is reported from the 7th District.

The rate for total Respiratory Diseases likewise shows a distinct decline, with a fall of 11% from 168.5 last week to 149.6. This compares favorably with the rate of 196 for the corresponding period last year. Declines of from 10% to 35% were registered in most of the Districts, and only the 1st District and the Potomac and Severn Commands showed increases in admission rates. The highest rate for the week, 273.3, is reported from the 5th District, where it represents a decline of 16% from last week's figure. The rate in the 7th District showed the largest proportionate decrease, falling 35%, from 70.4 to 45.5, which is the lowest rate experienced in any District this week.

INFLUENZA AND CATARRHAL FEVER, ACUTE. The admission rate for these diseases dropped to 81.2, which is 13% lower than the rate of 93.5 reported last week, and well under the rate of 119.2 experienced during the corresponding period last year. The trend has been steadily downward for the past six weeks. All of the Districts share in this decrease this week except the 1st District and the Potomac and Severn Commands, where increases are noted from previously low rates. In the 5th District, where the rate is highest, there is a decline of 14% to 130.3 from last week's rate of 210.9.

PNEUMONIA--BRONCHO AND LOBAR. There is a further slight increase in the rates for these diseases, from 1.2 last week to 1.5 for the current period. The rate however is still quite low as compared to last year's rate of 4.0. The highest rate, 6.8, is reported this week by the 4th District, where there was no incidence last week. The 3rd, 6th, and 7th Districts report no admissions for these diseases.

PNEUMONIA, ATYPICAL. A further decline is noted in the rate for this disease; the drop to 0.3 from the level of 1.8 a week ago is an accentuation of the trend that has been manifested during the past month. The rate for the corresponding period last year was 2.0. The highest rate for the week was 3.3 experienced in the 9th District, while eight Districts had no cases at all.

TONSILLITIS AND PHARYNGITIS, ACUTE. There is an 8% reduction in the rate for these diseases from last week's 72.1 to 66.1 for the current week. This is below the rate of 71.0 recorded for the corresponding period of last year. This week's decrease occurred principally in the 5th, 9th, 12th and 13th Districts, where improvements of from 12% to 19% were experienced. The majority of the other Districts reported moderate increases over their previous week's rates.

SCARLET FEVER. The admission rate for scarlet fever this week reaches the lowest level since the first of the year. The current rate of 12.4 is 13% lower than last week's 15.1, and is well below last year's rate of 17.0. Six of the Districts experienced no incidence of scarlet fever this week. The bulk of the cases this week are in the 5th, 9th and 11th Districts. In the 11th District the rate remains unchanged at 34.5, while in the 5th and 9th Districts the rates are 37% and 24% lower, respectively, than the rates of last week.

MEASLES. The rate for measles maintains a gradual decline, although the curve is higher than that of last year. The Current rate of 9.0 is compared to that of 9.3 for last week, and is decidedly above last year's rate of 4.0. The highest rate for the week is in the 11th District, where the rate of 28.3 shows an improvement over last week's 40.3.
